

PP3S Diary 6

Group E

May 2026

This week, I took a look at the front end and noted down in the issues list what still needs to be changed in the UI and in terms of functionality. Among other things, we still need a mechanism for when users forget their password and can no longer log in. I'll now pick a few of the compiled issues and implement them. (Ella)

Last week, after the presentation and our group discussion, we felt that most of the basic functionality had already been implemented. We also looked at the progress of other groups and discussed possible improvements for our own project. I will now go through the new tasks we came up with this week and see which ones need to be done and which I can work on. (Yifan)

This week, I reviewed the current state of the frontend from a user perspective and explored the available features and user flows. I identified several areas for improvement regarding usability, feedback, and overall user experience. The findings were documented and entered into our Linear workspace as development tasks to support future frontend improvements and feature refinement. (Mehmet)

This week we talked about the presentation, what went right, what went wrong and what we can learn. I also looked at issues in our Demo and added them to Linear. (Tekle)

After the group meeting, we discussed and planned out the next steps to finish up the last requirements. For this week, I completed the pull request for my frontend redesign, to green out the lints and build pipelines. Furthermore, I started to begin exploring the options for google cloud to migrate our hosting over from the privately hosted VPS server. I also started the dev to main branch PR and will continue to work with Moritz and David on peer-reviewing the first production ready main branch. (David)

After the groupmeeting we discussed the presentation and our learnings and how we are going to continue the project. We decided that everybody starts working on small full stack issues. I am waiting for feedback but I am optimistic

that this will be a good way to proceed and I am confident that we will finish on track. The rest of the week I spend it doing the necessary management work in Linear, Github and Signal (David A)

Following our presentation last week, my focus is now on polishing and working on the frontend. I asked each of the group members to have a look at the current state of the UI and note down everything they think needs changing or redesigning. Thus, in the following days, I will implement everything mentioned. (Oliver)

After our presentation in the last week, our focus as a backend team now shifted more towards addressing the potential improvements to be done on the frontend part. As a result, I have familiarized myself with our application and tried to identify any potential areas for improvement, and I have addressed two minor issues and am now planning on working on them in the following days. (Doruk)

I did smoke, playwright and other tests with our demo. I am preparing to make a PR next week to lay the foundation for our testing. (Moritz)
